Profile

Experienced data professional with a robust background in statistical analysis, business intelligence, and data science. Proficient in leveraging data-driven insights to solve complex business problems, drive strategic decision-making, and enhance operational efficiency. Skilled in Python, SQL, data
visualization tools, and Power BI. Seeking opportunities to apply analytical expertise in a dynamic and collaborative environment.

Education

2020 – 2024
Asyut, Egypt

Bachelor of Computer and Information in Computer Science
Àssiut University

Skills

Proficient in programming languages such as
Java, Python, C++ and MATLAB

Familiarity with database management systems, such as
MySQL and SQL

Experience with software development methodologies, including Agile

Excellent written and verbal communication abilities

Experience using Machine Learning and Deep Learning Tools and Algorithms

Strong understanding of data structures and algorithms

Data Visualization and Reporting
Power BI and Excel

Problem-solving and analytical skills for troubleshooting and debugging

Self-motivated with a strong desire to learn and stay updated with industry trends

Projects

COVID-19 Data Analysis (SQL)
- Analyzed COVID-19 data using SQL queries.
- Utilized tables CovidDeaths and CovidVaccenation.
- Sorted and retrieved data based on specific columns.
- Calculated percentages for deaths and population infected in different locations.
- Identified countries with high infection rates relative to their population.
- Analyzed death rates by continent.
- Combined data from multiple tables for population and vaccination comparisons.
- Utilized Common Table Expressions (CTEs) for query organization.
- Created temporary tables for data manipulation.
- Developed a view for future visualization.

House Pricing Analysis(Python)
- Conducted analysis of house pricing data using Python.
- Utilized libraries such as Pandas, NumPy, and Matplotlib for data manipulation and visualization.

- Performed exploratory data analysis (EDA) to understand the distribution and characteristics of the dataset.
- Cleaned and preprocessed the data by handling missing values, outliers, and categorical variables.
- Visualized and interpreted the results through various plots and charts.

Udemy Analysis(Python)
- Conducted analysis on Udemy course data using Python.
- Utilized libraries such as Pandas, NumPy, Seaborn, and Matplotlib for data manipulation and visualization.
- Gathered data on Udemy courses, including attributes such as course title, instructor, rating, price, and number of subscribers.
- Performed exploratory data analysis (EDA) to understand the distribution and characteristics of the dataset.
- Cleaned and preprocessed the data by handling missing values, outliers, and formatting inconsistencies.
- Analyzed trends and patterns in course ratings, prices, and popularity.
- Utilized visualizations such as bar plots, scatter plots, and histograms to present the findings effectively.

Movies Analysis
- Analyzed the top 250 movies dataset sourced from IMDb using Power BI to extract insights into movie ratings, genres, and directors' impact.
- Cleaned and preprocessed the dataset for analysis, including handling missing values and data transformations.
- Created relationships between multiple tables for effective data modeling.
- Designed interactive visualizations such as bar charts, scatter plots, and histograms to explore trends and patterns.
- Identified key insights such as genre popularity, director impact on movie success, and ratings distribution.
- Developed an intuitive dashboard for clear presentation and dynamic exploration of the data.
- Documented the analysis process for clarity and reproducibility.
- Shared the project on GitHub, including the Power BI report (PBIX file) and documentation.

Breast Cancer Detection
- Developed a machine learning model for breast cancer detection using Python.
- Preprocessed and cleaned the dataset, ensuring data quality.
- Implemented and trained various classification algorithms.
- Evaluated the model using appropriate evaluation metrics.
- Optimized the model for better accuracy and performance.
- Provided insights and recommendations based on the analysis to improve breast cancer detection and diagnosis

Predict Real Estate Prices
- Developed a machine learning model using regression techniques to predict real estate prices.
- Preprocessed and cleaned the dataset to ensure data quality.
- Implemented regression algorithms for accurate price predictions.
- Evaluated the model using appropriate regression evaluation metrics.
- Optimized the model for improved accuracy and performance.
- Provided insights and recommendations to support real estate pricing decisions

Professional Experience

2022 – 2024 **Head of Machine Learning & Data Science Team**
Asyut, Egypt *Google Developer Student Clubs - Assiut University*

2022 – 2023 **Data Analyst | Data Scientist Trainee**
Cairo *Instant*
